

PROGRAMS OFFERED

◆ MOT

Occupational therapy professionals work to enable engagement in daily meaningful activities or occupations to promote physical, psychological, and spiritual health and well-being. Occupational therapy assessments and interventions aim to empower individuals to live independent, productive, and satisfying lives despite disease, injury, mental illness, developmental disabilities, or other limitations.

Occupational Therapy Professional Work

Occupational therapists work with clients across the lifespan from newborn infants to the elderly. Intervention strategies include creatively using therapeutic activities to address clients' diverse needs in the following realms: motor, sensory, cognitive, visual, perceptual, emotional, and social. Occupational therapy also provides skilled training in the use of adaptive equipment and assistive technology as well as recommendations for environmental design and modification.

One of the benefits of a career in occupational therapy is the variety of settings available for employment including schools, hospitals, mental health centers, home health agencies, nursing homes, ergonomic and corporate settings, private practices, prevention programs, and community settings such as domestic violence and homeless shelters.

Employment Trends

Occupational therapy is a vital and growing profession. Payscale.com reports that occupational therapy remains a high-growth field, with 26%

more jobs predicted in the new decade. Earnings vary by setting, experience, and position. Occupational therapists' national average annual income is \$75,000.

Occupational Therapy Department

Within the Department of Occupational Therapy, faculty members play an active role in the education of students as evidenced by small class sizes with frequent one-on-one interaction. Faculty members mentor students throughout the program to prepare them for the National Board Certification examination and future employment.

The program strives to provide students with a well-rounded education. The program includes classes on topics such as splinting, therapeutic media, design and technology, and intervention techniques as well as professional growth, research, program development, and critical reasoning.

The department also offers its students a rich learning environment for developing professional skills. We believe that professional education is a journey of the mind, body, and spirit that involves growth and development in self-discovery, and clinical reasoning. The foundational, practice and professional learning helps provide professional competency in a supportive environment and promote lifelong learning.

Master's Degree

The Master's of Occupational Therapy is for individuals who have obtained a Bachelor's degree. The length of the program is 2 ¾ years. There are specific courses required for admission.

Admission requirements:

- Proof of completion of a Bachelor's degree from an accredited college or university
