

Thank you for your interest in the Radiologist Assistant Programs at Loma Linda University, Loma Linda, California. You, as a Radiologist Mentor, are a fundamental factor in making this program possible. Our students will depend on you for the greatest part of their education; their clinical skills acquisition. In turn, we hope to produce a valuable asset for your practice. Below you will find your responsibilities as well as the responsibilities of the student.

Responsibilities of the Radiologist Mentor

1. As a Radiologist Mentor, you will be responsible for supervising, teaching, guiding and documenting the Radiologist Assistant Intern's performance of radiologic patient care. You will be asked to document clinical hours and verify competency of radiologic procedures. An evaluation form will be provided for you at the conclusion of each academic quarter so that you may assess the student's progress.
2. Through your mentorship, the RA Intern will receive invaluable hands-on skills required to perform radiologic procedures competently. Under the appropriate supervision of the supervising Radiologist the RA Intern will be permitted to participate in patient assessment, patient management, and patient education, perform radiology procedures, and participate in the systematic analysis of the quality of patient care delivered within the radiology environment.
3. Under your guidance, the RA Intern will be taught to screen medical images for image quality, exam completeness, and abnormalities. The RA Intern will be permitted to sit with the radiologist while interpretation of images is being done and be allowed to evaluate images for critique and review.
4. Work with the Medical Advisor, as needed, to ensure that the medical components of the clinical preceptorship meet acceptable standards

Responsibilities of the Radiologist Assistant Student

1. As a Radiologist Assistant student, you will be responsible for learning and attaining clinical skills while working under the supervision of the mentor.
2. Under the appropriate supervision level of the mentor, you will be permitted to participate in patient assessment, patient management, patient education, perform radiology procedures, and participate in the systematic analysis of the quality of patient care delivered within the radiology environment.

At the end of the seven-quarter program of instruction, the mentoring radiologist will provide a final overall evaluation of the student designed to verify the student's final competency and eligibility to sit for national board exams.

I agree to participate as a Radiologist Mentor as outlined above and I am willing to enter into an instructional clinical affiliation with Loma Linda University, Radiologist Assistant Program.
